

Jagwing Pattern for A4 Paper

This is a pattern for the simple Thompson Jagwing, a foam "walkalong" glider for air surfing on a wave of deflected air. Go to Sciencetoymaker.org and look for "Air Surfing" for how to make or buy the thin EPS foam (.5mm) and building instructions. This is a gateway bug, a good first glider. Print with no scaling. There is a scale check below. Follow directions carefully the first time making and flying. Then experiment.
